

# Optimizing for a Specific Date

- 1 Current forecasting for the entire week of the chosen date based on the original schedule
- 2 The app will suggest an adjusted infusion schedule that positions the chosen date away from severe side effects with minimal disruption to the original schedule.

# Optimize for Date

## CHOOSE A DATE

06 / 29 / 2017

Based on your current schedule, you're predicted to feel severely fatigued (with a fatigue level of 4) and nauseous throughout the day. You may also experience constipation.

## SUGGESTION

To minimize the side effects on **June 29, 2017**, you will need to adjust your current schedule:

You currently have an infusion scheduled for May 3, 2017.

Moving your infusion to **May 2, 2017** will yield minimal side effects with a fatigue level of 0.
